1	31	4.9	3	<p>The guidance that "the PRCR will be required to engage the host and affected communities by meeting the notification and reporting requirements set forth at N.J.A.C. 7:26C-1.7(k) and by providing the details of the project", and further states that "Projects involving the use of alternative fill above the volume required to restore the prerediation topography and elevation of the receiving area of concern may also require formal municipal Planning Board or Zoning Board approval and, where required, approval by the regional planning entity (i.e., Highlands Council, Pinelands Commission, Meadowlands District) following a formal public meeting as specified above."</p> <p>CCNJ/SRIN request that DEP clarify/confirm that "formal public meeting" refers to a municipal Planning/Zoning meeting and is not related to PRCR engagement with the host/affected communities. PRCRs already adhere to public notice provisions and can meaningfully and effectively engage with the public without holding a formal public meeting.</p>
2	32	4.9	3	<p>The guidance states the following: "For projects that are not subject to RFS requirements, the PRCR will be required to provide semi-annual reports to the Department describing the status and projected completion date of the capping project."</p> <p>Since there is no regulatory requirement requiring the PRCR to submit semi-annual reports to the Department, CCNJ/SRIN request that DEP clarify/confirm whether they would consider this a deviation from guidance or a condition of approval of the use of alternative fill.</p>
3	63	Appendix B		<p>The Fill Use Plan Checklist states the following: "A description of the plan for modification of the Remediation Funding Source, if applicable, as outlined in Section 4.9.2". The Remediation Funding Source is referenced in Section 4.9.3, not Section 4.9.2.</p>
